Sample image of a Starter Kit for MSC COM modules (here: COM Express Type 7)

Dear Customer

Thank you for your purchase of an MSC Technologies Starter Kit. These kits contain all components necessary to operate Computer-on-Modules from MSC (e.g. COM Express, SMARC, Qseven, nanoRISC) for evaluation and test. The kit does not include any COM module to allow customers to select from MSC'S very wide offering of Computer-on-Modules.

Getting Started Document

MSC is providing a "Getting Started" document per type of starter kit. It describes in detail the contents of each kit and how to assemble it correctly. It can be downloaded from our Support Website using the following link:

https://www.msc-technologies.eu/support/boards/starter-kits.html

Open the web address above and select your Starter Kit. If in doubt, please refer to the product label on the left side of the Starter Kit's cardboard box. The "Getting Started" document can be found in the "Manual" folder.

Technical Support

For any queries or problems, please contact the MSC technical support for boards and modules:

support.boards@avnet.com
