

Mechanical 3D information for MSC modules

Avnet Embedded “AVE” (MSC Technologies) provides 3D models for our cooling solutions. This information can also be used by customers to help in designing their own cooling solution.

In addition AVE provides 3D models for some modules.

The module 3D information is provided for one particular variant of the module, this will be very similar for all other variants but not 100% identical since there will be different component population options between variants.

AVE reserves the right to make changes to components and layout changes without informing customers, so there is no guarantee that the models will always be fully representative.

Please contact our Avnet Embedded /MSC Technical Support if you need more details:
